

How we make the product better

A simple plan. One goal. A small test. We keep it only if it works.

YOU SAID

"Improve the overall experience."

That can mean many things. If we do not pick one, I keep sending screens and we still cannot tell if users are actually better off. I need a goal we can count before I send more work.

THE PLAN · THREE STEPS, EVERY TIME

1

Pick one goal we can count

One number. Not a feeling. Then we both know what "better" means.

2

Try it with a few real users

We do not show a new flow to everyone on day one. We try it with a small group first.

3

Keep it only if it works

If the number moves, we keep it. If it does not, we fix it. We do not guess.

FIRST

The new onboarding

We already started it from a short brief, so it is not done. We lock the goal, try this flow with real people, then decide. After that, we use the same three steps on the rest of the product.

MY PROMISE

I will not ask you to show this to everyone until a small test shows it helps.

In 90 days you will have:

- One clear goal
- A tested onboarding
- A way of working we can reuse

I NEED YOU TO PICK ONE

A

More new users finish setup

They connect an ad account and get into the product.

B

More users come back and use Orion

They return after day one and actually ask Orion for help.

C

Something else

Tell me in one sentence. I will turn it into a number we can count.

Reply A, B, or C. Then I send dates and next steps.

If you are not sure, pick A. We can change it later. No more screens until this is locked.
